About me

I'm a designer currently building and maintaining the Integrations platform at Datadog.

Education

Washington University in St. Louis
2018-2022

B.S. in Computer Science
Minor in Human-Computer Interaction
Minor in Mathematics

Early Experience

Andalusia Labs · Product Designer
January 2021 - October 2021 | Remote

- Collaborated with founders on early brand identity and product concepts.
- Designed landing page and web app

MongoDB · Product Design Intern
June 2021 - August 2021 | New York, NY

- Revamped core Atlas flows: database querying, document updating, and introduced new "Undo" pattern.
- Designed new query tool components
- Led user research sessions focused on Atlas Data Explorer and a team-wide design studio to ideate usability improvements.

Salesforce · UX Design Intern
May 2020 - August 2020 | Remote

- Redesigned the MuleSoft web app home page to increase productivity and improve navigation and personalization.
- Designed new components to expedite workflows, improve access to projects, and better onboard new users.
- Built upon design system to improve interactions in web app.

Work Experience

Datadog · Product Designer
December 2025 - Present | New York, NY

- Building and maintaining a UI component library for 1000+ integrations across Datadog, including Figma and React components, behavior and states, and documentation.
- Designed and shipped multiple end-to-end flows to support custom MCP servers in Bits (DD's AI chatbot) and Integrations.
- Integrated within an engineering team to design, build, and ship a Datadog-wide component to display integration metadata and live statuses on any product surface.
- Designing, coding, and testing components and features myself to reduce burden on engineering team increase the product velocity of Integrations.

MongoDB · Product Designer
August 2022 - December 2025 | New York, NY

Over three years, I designed and evolved core workflows across MongoDB's flagship Atlas platform. Partnering closely with PMs, engineers, and researchers, I focused on cluster configuration and storage services, shaping a more unified and refined database experience used by thousands of developers.

- Partnered with another designer to lead design for a foundational initiative, Atlas Infinite, introducing a new storage architecture that reshaped MongoDB's core offerings and positioned Atlas for the future.
- Led visual design learning sessions for new-grad designers, focusing on fundamental principles and best practices for Atlas and other MongoDB offerings.
- Unified two Atlas products, merging separate database services into a single product with new landing and home pages that simplify navigation and data interaction.
- Designed or revamped many aspects of core cluster creation and configuration flows, including global cluster configuration, cluster tiers, security, and other advanced settings.
- Redesigned configuration, connection, and in-product marketing, as well as delivered a new core workflow for schema creation and management for the Atlas SQL Interface.
- Designed the end-to-end flow for cluster tagging across cluster creation, the cluster dashboard, and in project and organization-level tagging.
- Revamped the entire flow for creating and managing custom roles in Atlas.
